

FLIGHT MANEUVER ANALYSIS SHEET (FMAS)

- A. We have developed a method of analyzing and studying flight maneuvers that incorporates 10 variables:
- | | | |
|----------------------|-------------------|---------------------------|
| 1. Maneuver | 5. Altitude(s) | 9. Traffic considerations |
| 2. Objective | 6. Airspeed(s) | 10. Completion standards |
| 3. Flight path | 7. Control forces | |
| 4. Power settings(s) | 8. Time(s) | |
- B. A copy of an FMAS (front and back) appears on the next pages for your convenience. When you reproduce the forms for your own use and later for your students, photocopy onto the front and back of a single sheet of paper to make the forms more convenient. The front side contains space for analysis of the above variables. The back side contains space for
1. Make- and model-specific information
 - a. Weight
 - b. Airspeeds
 - c. Center of gravity
 - d. Fuel
 - e. Performance data
 2. Flight instrument review of maneuver
 - a. Airspeed indicatorASI
 - b. Attitude indicatorAI
 - c. AltimeterALT
 - d. Turn coordinatorTC
 - e. Heading indicatorHI
 - f. Vertical speed indicatorVSI
 3. Common errors
- C. You should prepare/study/review an FMAS for each maneuver you intend to perform before each flight lesson. Photocopy the form onto single sheets of paper (front and back). Changes, amplifications, and other notes should be added subsequently. Blank sheets of paper should be attached (stapled) to the FMAS, including self-evaluations, "to do" items, questions for your CFI, etc., for your home study during your flight instruction program. FMASs are also very useful to prepare for the practical test.
1. A major benefit of the FMAS is preflight lesson preparation. It serves as a means to discuss maneuvers with your CFI (as well as with your student) before and after each flight. It emphasizes preflight planning, airplane make and model knowledge, flight instruments, and common errors.
 2. Also, the FMAS helps you, your future students, and pilots in general to focus on the operating characteristics of your/their airplane, including weight and balance. Weight and balance, which includes fuel, should be carefully reviewed prior to each flight.
